

Our DevOps Portfolio

Your way to great software

DevOpsFlow

The transformative power of DevOpsFlow optimizes your software development and IT operations processes to achieve faster and more reliable results. From automated testing to continuous delivery, DevOpsFlow enables your teams to collaborate efficiently and accelerate innovation.

InfraWatch

InfraWatch puts you one step ahead of potential problems and security threats. Our state-of-the-art monitoring and security solution provides real-time insights into your network and infrastructure. Be proactive in protecting your data, complying with regulations and ensuring uninterrupted operations.

InfraTech

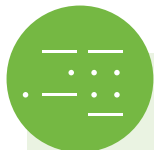

InfraTech is the answer to managing and optimizing your infrastructure. Use the power of modern technologies to optimize your IT infrastructure, reduce costs and increase performance. With Infratech, you can ensure that your systems are always running optimally so that you can concentrate on your core business.

CloudShift

Take advantage of the future of cloud computing with CloudShift. Seamlessly migrate your applications and data to the cloud and benefit from unparalleled scalability, agility and cost efficiency. Whether you're new to the cloud or looking to optimize your existing system, CloudShift is your partner for cloud success.

CloudEase

CloudEase simplifies cloud management and governance. Easily take control of your cloud resources, costs and compliance requirements. With CloudEase, you can ensure that your cloud environment is both user-friendly and secure, and that your teams can work more efficiently in the cloud era.

Infrastructure as Code

Leverage the power of Infrastructure as Code (IaC) to revolutionize your IT operations. Optimize deployment, improve scalability and ensure consistency by using our state-of-the-art IaC solutions for efficient and automated infrastructure management.

CI/CD

Improve your software development lifecycle with our CI/CD solutions. Automate testing, continuous integration and seamless deployment and empower your team to deliver high-quality code faster and more reliably than ever before.

GitOps

Transform your approach to application management and deployment with our GitOps solutions. Optimize operations by using version-controlled repositories to declaratively manage infrastructure and ensure consistent, automated and auditable application deployments.

Observability

Gain deep insights into the performance and health of your system with our observability solutions. Leverage advanced monitoring, logging and tracing capabilities to proactively detect issues, optimize resource usage and deliver an exceptional user experience.

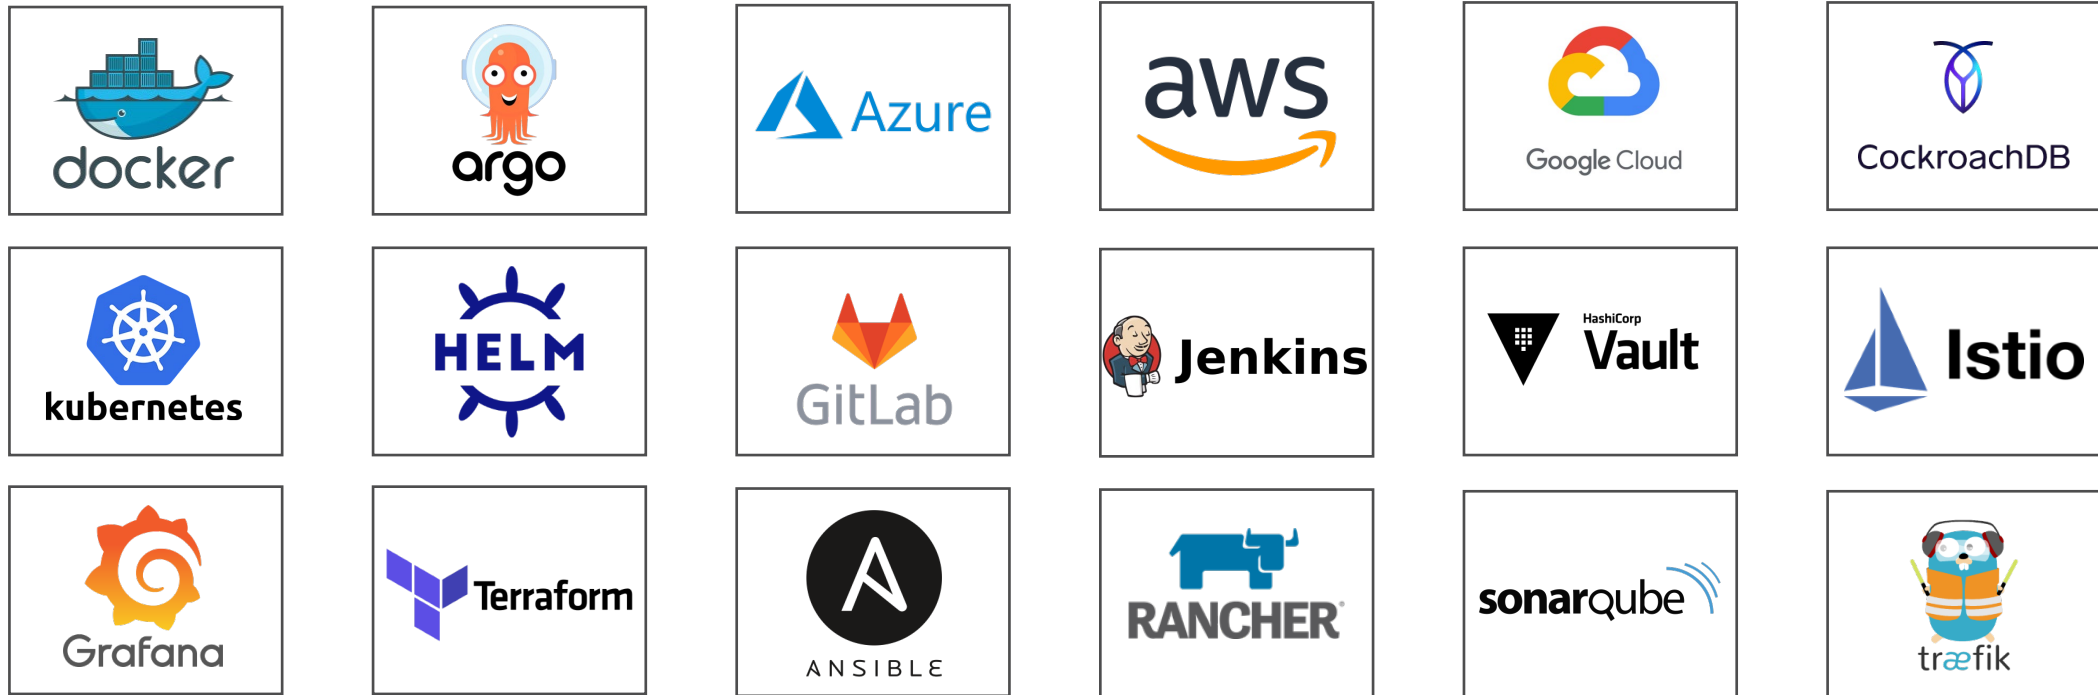

Cloud Migrations

Embark on a seamless cloud migration with our expertise at your side. Move your applications and data securely to the cloud and maximize efficiency, scalability and cost savings while minimizing disruption.

Our DevOps Tech Stack

Our DevOps experts have honed their skills in various industries and technologies. **That's why we pride ourselves on always being one step ahead. We use the latest tools and methods to drive your success.**

DEEP DIVE: DevOps

4 Reasons for DevOps from QualityMinds

20+ Successful projects

With expertise in finance, banking, manufacturing, energy and transportation, we have successfully implemented over 20 impactful projects that drive innovation and progress across multiple sectors.

1000+ nodes in maintenance

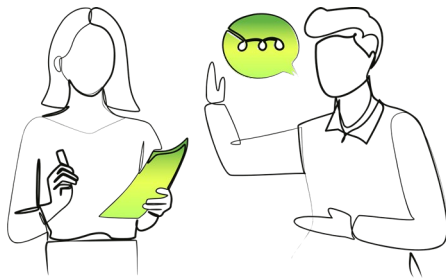

Our skilled team effectively manages and maintains over 300 nodes to ensure smooth operations and first-class performance across multiple sites.

Different markets

Our reach extends across different markets, providing customized solutions for different needs and challenges and creating a global impact.

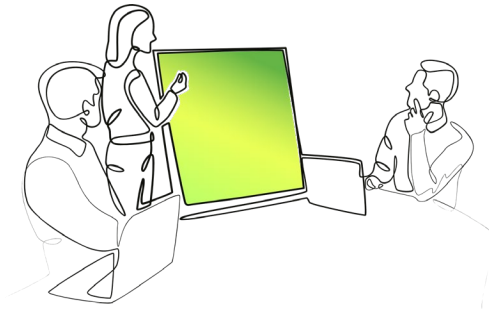

Step 1

Challenge

In the first step, we always want to understand the customer, their domain, special features and landscape. To do this, we ask a lot of questions and summarize our findings.

Step 2

Analysis

We then deepen our understanding of the problems through examples, which we discuss in a workshop, for example. Our experience enables us to describe the problems better.

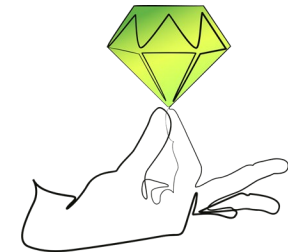

Step 3

Solution & Implementation

Based on the findings, we develop conceptual and technical solutions. To do this, we increasingly use approaches from agile software development and design thinking.

Step 4

Validation

Solutions and products must deliver tangible added value. We validate our solutions over time using quantitative and qualitative methods. Refactoring is not excluded here.

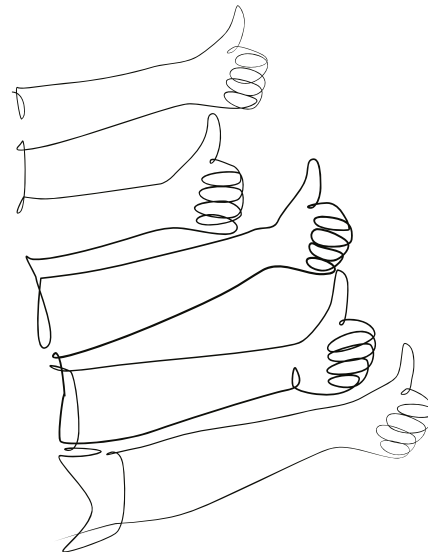

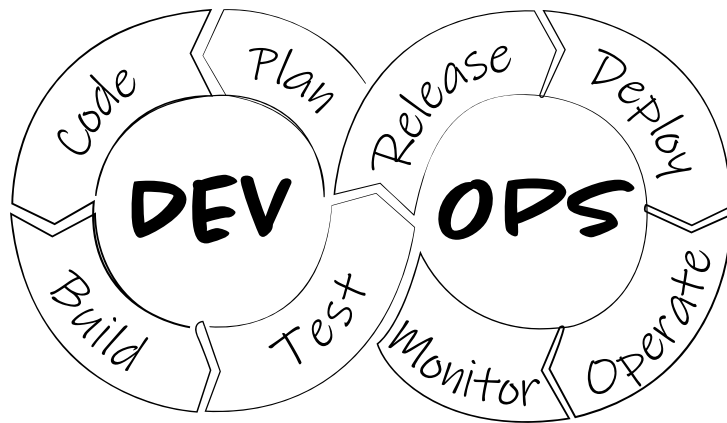

DevOps Definition & Advantages

DevOps is a set of practices, principles and cultural philosophies that aim to **improve and automate collaboration and communication between software development (Dev) and IT operations (Ops) teams.**

Companies that focus on DevOps bring more products and services to market in less time.

The time required to create and provide software is reduced.

The complexity of maintaining an application is reduced.

Improved collaboration between developers and operations.

Continuous integration and deployment ensure faster time to market.

We are your contact partners

Our minds are our lifeblood, successfully supporting our customers with their agile mindset, drive quality in the digital transformation.

As experts in software engineering and testing, we advise our clients and also provide them with hands-on support in IT projects. Our success is defined by a holistic approach to software quality, in which we consider technical, organizational and human aspects.

That is why we also provide holistic advice on the topic of agility, including agile learning. We develop innovative concepts for learners within organizations and support them in discovering and developing their full potential. We ourselves are an agile organization that learns from and with each other.

A place for Quality and great Minds!

TESTING

Testing (agile/classical)
Test automation
Test management & TestMaster
Test Coaching

SOFTWARE BAUHAUS

Customized product development
From the idea to the product
Discovery workshops
Operation & maintenance

SOFTWARE DEVELOPMENT

Agile software development
Customer projects (consulting & support)
On-site product development
Solution consulting incl. architecture

DEVOPS

CI/CD and GitOps
Infrastructure as the code (IaC)
Cloud-based oriented architecture
(AWS and Azure)
Observability platform

QUALITY LEARNING

Agile Learning Coach training
Agile teaching/learning
architectures
Agile (group) learning coaching
Diversity

AI / MACHINE LEARNING

AI Testing
Model implementation
AI Strategy coaching
In-house AI framework

AGILE SUPPORT

Scrum Master
Agile Coaching
Agile Leadership
Agile Change

REQUIREMENTS ENGINEERING

Agile RE
Testability
RE essentials
